

WHY INVESTORS SHOULD BUY **WEX**

1. **A Real, Live Product — Not a Promise**

Wenode is already operational. Investors with a test account can log in today and see it functioning:

- Fully working Command Dashboard
- Live nodes
- Active AI seed model
- Governance & voting portal
- Partner infrastructure
- Fiat payout system via Stripe

This eliminates the execution risk that kills most early-stage launches.

2. **A Self-Expanding Mesh With Built-In Virality**

Wenode includes a clean, ethical affiliate engine (L1 + L2) with instant Fiat payouts via Stripe. No crypto knowledge required.

Every user becomes a growth node, accelerating global mesh expansion organically.

3. **AI-Driven Compute That Scales on Demand**

The live AI layer dynamically forms ephemeral super-compute clusters across the mesh. This delivers:

- Cheaper compute
- Greener compute
- Instantly scalable compute

All without building traditional data centers.

4. **Fiat-First = True Mass Adoption**

No wallets. No gas fees. No MetaMask.

Users pay with credit cards via Stripe. Node operators earn Fiat via Stripe Connect.

This opens the door to:

- Grandmothers
- Solopreneurs
- Small businesses
- Large OEM partners

not just crypto-native users.

WEX is not required to use the platform.

As the mesh grows (more nodes, more compute jobs, more partners), natural demand for the token increases. Early holders benefit from this organic utility curve.

6. True DePIN Governance: 1 Soul = 1 Vote

- Only verified node providers ("souls") get one vote
- Tokens have zero governance power
- No whales, no capture
- Governance portal already live

This creates fair, stable, long-term governance.

7. Massive Eco & Scale Advantage

Wenode re-purposes existing hardware worldwide instead of building expensive, high-impact data centers and dumping in landfill.

When paired with EV, mobile, robotics, IoT, and Smart TV OEMs, the mesh can deliver planetary-scale compute at a fraction of the cost and environmental footprint.

8. Early Entry With Asymmetric Upside

- Fixed supply: 10,000,000 WNODE
- Presale: 15%
- Funds will be used to buy Tech to accelerate & secure partnerships

A small raise + a live product = high upside positioning before the hardware scaling phase and public launch.

9. Fast Execution Timeline

- MVP: Live today
- Hardware scaling: Next few weeks
- Major partner onboarding: Ongoing
- Full public launch: 4-6 weeks

10. Summary: A Truly Rare Opportunity

Wenode stands out because it already has:

- A working AI-powered DePIN mesh
- Real dashboards
- Real compute
- Real Fiat rails
- Real governance (1 soul = 1 vote)
- Real virality

This raise is not funding an idea - it is funding the acceleration of something that already exists.
