

WNODE — FOUNDER SLOT OFFER

Wnode has built the world's first planetary compute mesh and a unified execution layer that connects Web3, Web4, AI, enterprise systems, robotics, vehicles, and sovereign infrastructure into a single, verifiable, zero-trust fabric. As this global mesh expands, it will absorb millions of devices and become the coordination layer for decentralized compute worldwide.

At the foundation of this architecture sit the Founder Slots which are the only root-level economic positions in the network. These slots are structural placements inside the topology of the mesh, permanently encoded into the identity graph of the network. Only three Founder Slots are available right now and forever. Once taken, they are sealed forever.

Each Founder Slot anchors a Founder Affiliate Tree which is a living, expanding economic structure that grows downward through direct operators, indirect operators, and the infinite layers of the global mesh. Every node in this lineage contributes compute to the network, and every contribution generates revenue. The Founder's position is immutable, cryptographically enforced, and permanently tied to the growth of the mesh.

Founders earn from five compounding income streams, each aligned with a different axis of network growth:

- Node Revenue — earnings from every compute task performed by every node in the Founder's lineage.
- Level 1 Commission 3% — revenue from operators directly onboarded by the Founder or by organic growth from new operators who join Wnode without an affiliate invite.
- Level 2 Commission 10 % — revenue from operators onboarded by Level 1 affiliates.
- 3% Infinite-Depth Override — the most powerful component: a perpetual share of all economic activity across the entire tree, regardless of depth.
- Token Value Accretion — macro-level upside as Wnode becomes the economic backbone of global decentralized compute.

This structure mirrors the architecture of the network itself: layered, compounding, and self-expanding. As the mesh grows across devices, industries, and geographies, the Founder's economic footprint grows with it. The Founder Slot is a placement in the foundation of a system designed to scale across the entire planet.

This is a one-off offering: Three Founder Slots \$100,000 USD as a package which represents a highly leveraged potential ROI opportunity. and Once taken, they are gone forever

For family offices, HNW individuals, and private networks, this is the earliest and most privileged position available in a network engineered to unify global compute and define the next era of decentralized infrastructure.

Each slot must be taken by a Human and each slot gives the Founder a place on the Governance Board.
