

Key Compromise Plan — One Page (MetaMask + Hardware Dongle)

1. Current key custody

- Primary signer: Stephen — MetaMask on laptop; hardware dongle (used as primary signer via MetaMask).
- Secondary signer: None currently; plan to add second hardware signer or cofounder within 30 days.
- Admin hot key: None for treasury (MetaMask only used for small ops).

2. Encrypted backups

- Primary backup: Seed phrase for hardware dongle stored offline in a secure location.
- Secondary backup: Duplicate paper seed phrase stored in a separate secure location
- Backup rotation: Verify backups every 6 months.

3. Compromise detection

- Unexpected outgoing transfers on Polygonscan from the known treasury address.
- Unfamiliar MetaMask approval prompts or connection requests.
- Alerts from monitoring tools or reports from partners.

3. Immediate actions (first 2 hours)

1. Publish dataroom notice: "Key compromise suspected — initiating containment."
2. Freeze planned transfers and pause non-emergency operations.
3. Instruct all team members to stop approving MetaMask prompts.
4. Capture evidence: screenshots of MetaMask, recent txs, and any suspicious pages.
5. If seed phrase suspected exposed, do not use that wallet again; move funds using an uncompromised signer.

4. Emergency migration

1. Emergency multisig: To be created — 2-of-3 multisig planned (will publish address within 7 days).
2. Validate migration path with a small test transfer ($\leq 1\%$ treasury) from an uncompromised signer.
3. If test succeeds, transfer remaining funds in controlled batches to the emergency multisig using uncompromised signers.
4. Record each tx hash and upload to the dataroom immediately.

5. Post-incident review

- Conduct root cause analysis and rotate all keys and seed phrases.
- Require hardware wallets for signers holding material funds.
- Engage external security auditor if material funds were lost.

6. Contacts and escalation

- Primary contact: Stephen — REDACTED
- Secondary contact: REDACTED

7. Review cadence

- Review this plan every 6 months or after any key incident.
