

Term Sheet: **WEX** Private Seed Round

Project Name: Wnode (Wenode)

Founder: Stephen Soos

Canonical **WEX** contract and treasury: 0xa382506695f825fe807C3f4D47aEB986046bdc57 (Polygon)

1. Investment Summary

Raise Target: USD \$80,000

Investment Instrument: SAFT (Simple Agreement for Future Tokens)

Asset Type: **WEX** Utility Token (fixed supply)

Total Token Supply: 10,000,000 **WEX** (no further minting)

Private Seed Price: USD \$0.116 per **WEX**

Public Launch Price (target): USD \$0.166 per **WEX**

Allotment example: At the private price, USD \$80,000 would purchase approximately 689,655 **WEX**.

2. Lockup & Vesting Summary (high level)

These terms reflect the operational model for the initial seed round and the Founder's single-operator control during the first phase.

- Private investor vesting: 10% released at Token Generation Event (TGE). The remaining 90% is released linearly over 3 months following a 1-month administrative period; releases occur daily pro rata and are visible on-chain.
- Founder allocation availability: The Founder allocation of 1,000,000 **WEX** is available at TGE to fund equipment and operations. Transfers above 25,000 **WEX** are subject to a 48-hour on-chain timelock and will be published with the on-chain transaction hash.
- Founder & Council allocations: Founder Slots (3 × 50,000 **WEX**) follow the private investor schedule unless otherwise agreed in writing.
- Liquidity lock: Liquidity provided to DEXs will be locked for a minimum of 12 months unless otherwise agreed in writing.

3. Final Allocation Table (100% Total)

Total Supply: 10,000,000 **WEX**

Allocation	%	Amount	Purpose & Strategy
Node Rewards	20.0%	2,000,000	Long-term incentives for verified compute providers.
Investment Rounds	23.5%	2,350,000	Private seed + public presale capital (primary fundraising pool).
Founder Slots (3 × 50k)	1.5%	150,000	Reserved for 3 Founder slots (50,000 WEX each); vested per terms.
Liquidity Pool	15.0%	1,500,000	Locked DEX liquidity to ensure market stability and depth.
Operations	10.0%	1,000,000	Core dev, security audits, and daily network management.
DAO Treasury	15.0%	1,500,000	Ecosystem sustainability, R&D, partner/hardware grants
Founder (Stephen Soos)	10.0%	1,000,000	Founder allocation; available at TGE for equipment/operations.
Growth & Infra	5.0%	500,000	Marketing, user acquisition, and mesh scaling.
Total	100%	10,000,000	Fixed Total Supply

4. Financial Architecture: Fiat-First with Clear Separation of Token Sales

Wenode's product is designed for enterprise adoption with a fiat-first user experience while keeping token economics transparent and on-chain.

- Raise and use of proceeds: USD \$80,000 to be used exclusively for equipment and hardware procurement required to deploy and validate the initial compute nodes. All funds raised in the Private Seed Sale will be spent on equipment, shipping, installation, and direct deployment costs. Procurement receipts, vendor invoices, and deployment verification will be published in the dataroom for transparency.
- Separation of concerns: Customer fiat flows (enterprise payments for compute) are operational and separate from investor token sale mechanics. Token sales and investor deliveries are executed on-chain (USDC on Polygon) and are subject to the KYC/AML and vesting rules described in this document.
- Payments and settlement: All token sale proceeds are accepted in USDC on Polygon unless otherwise agreed in writing. The Issuer will maintain clear ledgers separating commercial revenue (fiat) from token sale proceeds and will publish periodic reconciliations in the dataroom.

5. Governance Model

Wenode uses a human-centric governance model focused on operational integrity and anti-plutocracy.

- NODLR Sovereignty: Voting rights for protocol governance are restricted to verified human node operators (NODLRs) under a one verified human = one vote principle.
- Token role: Token holdings do not automatically confer governance power. **WEX** is primarily an economic and utility instrument; any token-linked governance features will be explicitly defined in governance documentation and require community approval.
- Founder Council: The Founder Council is advisory only and provides strategic guidance. Any binding governance change requires the approved governance process and explicit ratification by the governance body.
- Transparency and audits: Governance proposals, treasury disbursements, and major partner grants will be published in the dataroom with supporting documentation and on-chain evidence where applicable.

6. Investment Opportunity: Private Seed Round

Wenode is conducting a Private Seed Sale from the Investment Rounds allocation to raise USD \$80,000 for equipment procurement and initial deployments.

- Raise target: USD \$80,000 (equipment, shipping, installation, and deployment validation).
- Private sale price: USD \$0.116 per **WEX**.
- Public launch price (target): USD \$0.166 per **WEX**.
- Payment method: Payments accepted in USDC on Polygon or direct bank transfer.
- Allotment example: At the private price, USD \$80,000 would purchase approximately 689,655 **WEX**. Final allotments and investor caps will be set in the Term Sheet.
- Use of proceeds reporting: The Issuer will publish procurement receipts, vendor invoices, and deployment verification evidence in the dataroom within 30 days of each major equipment purchase.
- KYC/AML: Purchases equal to or above USD \$15,000 are subject to KYC/AML verification.

7. Vesting and Security

Private investor vesting: 10% released at Token Generation Event (TGE). The remaining 90% is released linearly over 3 months following a 1-month administrative period. Releases occur daily pro rata and are visible on-chain.

Founder allocation availability: The Founder allocation of 1,000,000 **WEX** is available at TGE and may be used to fund equipment and operations. Transfers above 25,000 **WEX** are subject to a 48-hour on-chain timelock and will be published with the on-chain transaction hash.

Founder Slots: Founder slot allocations (3 × 50,000 **WEX**) follow the private investor schedule unless otherwise agreed in writing.

Liquidity lock: Liquidity provided to DEXs will be locked for a minimum of 12 months unless otherwise agreed in writing.

Security practices — single-operator initial model: The treasury is controlled by the Founder as a single operator using a hardware wallet. To provide transparency and basic safeguards:

- Transfers above 25,000 **WEX** are subject to a 48-hour timelock prior to execution.
- The Issuer will publish the canonical smart contract address, third-party audit reports, and every treasury transfer tx hash in the dataroom immediately after execution.
- The Issuer will maintain a documented admin rotation and key-compromise plan.

Future multisig transition: Once additional founders are allocated and seated, the Issuer will migrate treasury control to a 2-of-3 multisig model. The migration plan and multisig addresses will be published in the dataroom prior to activation.

8. Canonical Token and Test Deployments

Canonical **WEX** contract and treasury

The only official **WEX** contract and Wnode treasury is 0xa382506695f825fe807C3f4D47aEB986046bdc57 (Polygon). Any other WNODE/**WEX** deployments are test or deprecated and are not valid for purchases, allocations, transfers, or investor deliveries.

a. Test deployments

Early internal test deployments were used solely for technical validation and are formally deprecated. Test tokens were never distributed as part of the economic model and carry no economic or legal weight.

b. On-chain transparency and publication

The Issuer will publish the canonical contract address, treasury address, and any relevant multisig or timelock contract addresses in the dataroom. All investor deliveries, treasury transfers, and liquidity provisioning transactions related to the canonical contract will be published with on-chain transaction hashes in the dataroom.

c. Audits and security evidence

Third-party smart contract audit reports, security assessments, and a summary of findings will be uploaded to the dataroom prior to any public sale. Any material changes to contracts or treasury control will be accompanied by an updated audit or security review.

c. Dispute and verification process

If a third party claims a different contract or treasury address is canonical, the Issuer will resolve disputes by publishing the authoritative contract source code, verified Polygonscan contract page, and a signed statement from the Founder in the dataroom.

9. Use of Proceeds and Procurement Transparency

All equipment purchases funded from the Private Seed Sale will be recorded in the dataroom with vendor name, invoice, payment tx hash, and deployment verification (photos, serial numbers, or on-chain node registration). These records will be updated within 30 days of each purchase.

10. Contact and Versioning
