

WEX (Wenode) Tokenomics: The Economic Engine of AI Powered Planetary Compute Mesh

1. Executive Summary

Wenode is a Decentralized Physical Infrastructure Network (DePIN) designed to provide scalable, green, and cost-effective AI compute. By repurposing existing global hardware, **Wenode** eliminates the massive CAPEX associated with traditional data centers. Our "Fiat-First hybrid" architecture allows enterprises to access decentralized power with zero crypto complexity, while the WEX token (fixed supply: **10,000,000 WEX**) serves as a scarce utility layer to incentivize operators, provide discounted access to premium AI clusters, and accelerate network growth.

2. Token Utility & Core Mechanics

The WEX token is a fixed-supply utility asset with a hard cap of **10,000,000 WEX**. The Issuer holds the canonical supply in the Wnode treasury address **0xa382506695f825fe807C3f4D47aEB986046bdc57 (Polygon)** and will transfer tokens to purchasers per the Delivery mechanics.

Primary utilities

- **Compute Payments:** WEX can be used to access premium AI features and cluster services at a discount versus fiat pricing. (Target rollout Q3 2026.)
- **Node Reward Boosts:** Operators may stake WEX to increase yield multipliers for compute tasks and to access priority job queues. (Target rollout Q3 2026.)
- **Operator Incentives:** Node Rewards allocation funds long-term incentives for verified compute providers to secure and scale the mesh.
- **Optional Utility Layer:** WEX is an optional secondary layer for enterprises and operators who want reduced fees, priority access, or enhanced operator economics.

Governance relationship WEX is **decoupled from core governance** to prevent plutocracy. Governance rights are granted to verified human node operators (NODLRs) under a "one verified human = one vote" model. Token holdings do not automatically confer additional governance power; any token-linked governance features will be explicitly described in governance documentation.

Supply and minting status Total supply is fixed at **10,000,000 WEX**. No additional WEX will be created. The canonical WEX contract and treasury is **0xa382506695f825fe807C3f4D47aEB986046bdc57 (Polygon)**.

Notes on rollout Feature rollouts (staking, compute discounts, and node reward multipliers) are subject to technical readiness and may be phased. The Issuer will publish timelines and technical specifications in the dataroom and on the project website.

3. Final Allocation Breakdown (100% Total)

Total Supply: 10,000,000 **WEX**

Allocation	%	Amount	Purpose & Strategy
Node Rewards	20.0%	2,000,000	Long-term incentives for verified compute providers.
Investment Rounds	23.5%	2,350,000	Private seed + public presale capital (primary fundraising pool).
Founder Slots (3 × 50k)	1.5%	150,000	Reserved for 3 Founder slots (50,000 WEX each); vested per terms.
Liquidity Pool	15.0%	1,500,000	Locked DEX liquidity to ensure market stability and depth.
Operations	10.0%	1,000,000	Core dev, security audits, and daily network management.
DAO Treasury	15.0%	1,500,000	Ecosystem sustainability, R&D, partner/hardware grants (moved here).
Founder (Stephen Soos)	10.0%	1,000,000	Founder allocation; subject to vesting.
Growth & Infra	5.0%	500,000	Marketing, user acquisition, and mesh scaling.
Total	100%	10,000,000	Fixed Total Supply

4. Financial Architecture: The "Fiat-First" Advantage

Wenode's product is designed for enterprise adoption with a fiat-first user experience while keeping token economics transparent and on-chain.

Raise and use of proceeds

- **Raise target:** USD \$80,000 to be used **exclusively for equipment and hardware procurement** required to deploy and validate the initial compute nodes.
- **Use of funds:** All funds raised in the Private Seed Sale will be spent on equipment, shipping, installation, and direct deployment costs. The Issuer will publish procurement receipts, vendor invoices, and deployment verification in the dataroom for transparency.
- **Separation of concerns:** Customer fiat flows (enterprise payments for compute) are operational and separate from investor token sale mechanics. Token sales and investor deliveries are executed on-chain (USDC on Polygon) and are subject to the KYC/AML and vesting rules described in this document.

Payments and settlement

- **Token sale payments:** All token sale proceeds are accepted in **USDC on Polygon** unless otherwise agreed in writing.
- **Accounting and reconciliation:** The Issuer will maintain clear ledgers separating commercial revenue (fiat) from token sale proceeds and will publish periodic reconciliations in the dataroom.

5. Radical Governance: One Soul, One Vote

Wenode uses a human-centric governance model focused on operational integrity and anti-plutocracy.

- **NODLR Sovereignty:** Voting rights for protocol governance are restricted to verified human node operators (NODLRs) under a **one verified human = one vote** principle.

- **Token role: Token holdings do not automatically confer governance power.** WEX is primarily an economic and utility instrument; any token-linked governance features will be explicitly defined in governance documentation and require community approval.
- **Founder Council:** The Founder Council is **advisory only** and provides strategic guidance. Any binding governance change requires the approved governance process and explicit ratification by the governance body.
- **Transparency and audits:** Governance proposals, treasury disbursements, and major partner grants will be published in the dataroom with supporting documentation and on-chain evidence where applicable.

6. Investment Opportunity: Private Seed Round

Wenode is conducting a Private Seed Sale from the Investment Rounds allocation to raise USD **\$80,000** for equipment procurement and initial deployments.

- **Raise target:** USD **\$80,000** (equipment, shipping, installation, and deployment validation).
- **Private sale price:** USD **\$0.116** per WEX.
- **Public launch price (target):** USD **\$0.166** per WEX.
- **Payment method:** Payments accepted in **USDC on Polygon** unless otherwise agreed in writing.
- **Allotment example:** At the private price, USD \$80,000 would purchase approximately **689,655 WEX**. Final allotments and investor caps will be set in the Term Sheet.
- **Use of proceeds reporting:** The Issuer will publish procurement receipts, vendor invoices, and deployment verification evidence in the dataroom within 30 days of each major equipment purchase.
- **KYC/AML:** Purchases equal to or above **USD \$15,000** are subject to KYC/AML verification.

7. Vesting & Security

Private investor vesting: **10%** released at Token Generation Event (TGE). The remaining **90%** is released **linearly over 3 months** following a **1-month administrative period**. Releases occur **daily pro rata** and are visible on-chain.

Founder allocation availability: The Founder allocation of **1,000,000 WEX** is **available at TGE** and may be used to fund equipment and operations. Transfers above **25,000 WEX** are subject to a **48-hour on-chain timelock** and will be published with the on-chain transaction hash.

Founder Slots: Founder slot allocations (3 × 50,000 WEX) follow the private investor schedule unless otherwise agreed in writing.

Liquidity lock: Liquidity provided to DEXs will be locked for a **minimum of 12 months** unless otherwise agreed in writing.

Security practices single-operator model: The treasury is controlled by the Founder as a single operator using a hardware wallet. To provide transparency and basic safeguards:

- Transfers above **25,000 WEX** are subject to a **48-hour timelock** prior to execution.
- The Issuer will publish the canonical smart contract address, third-party audit reports, and every treasury transfer tx hash in the dataroom immediately after execution.

- The Issuer will maintain a documented admin rotation and key-compromise plan.

Future multisig transition: Once additional founders are allocated and seated, the Issuer will migrate treasury control to a **2-of-3 multisig** model. The migration plan and multisig addresses will be published in the dataroom prior to activation.

8. Canonical Token and Test Deployments

The only official WEX contract and Wnode treasury is **0xa382506695f825fe807C3f4D47aEB986046bdc57 (Polygon)**. Any other WNODE/WEX deployments are test or deprecated and are not valid for purchases, allocations, transfers, or investor deliveries.

Test deployments Early internal test deployments were used solely for technical validation and are formally deprecated. Test tokens were never distributed as part of the economic model and carry no economic or legal weight.

On-chain transparency and publication The Issuer will publish the canonical contract address, treasury address, and any relevant multisig or timelock contract addresses in the dataroom. All investor deliveries, treasury transfers, and liquidity provisioning transactions related to the canonical contract will be published with on-chain transaction hashes in the dataroom.

Audits and security evidence Third-party smart contract audit reports, security assessments, and a summary of findings will be uploaded to the dataroom prior to any public sale. Any material changes to contracts or treasury control will be accompanied by an updated audit or security review.

Dispute and verification process If a third party claims a different contract or treasury address is canonical, the Issuer will resolve disputes by publishing the authoritative contract source code, verified Etherscan/Polygonscan contract page, and a signed statement from the Founder in the dataroom.
