

## Treasury Timelock Policy — Manual Workflow (USD \$8,000 threshold)

### 1. Scope

This policy applies to all on-chain and off-chain transfers of **WEX** tokens or fiat equivalents executed from the canonical treasury under the Issuer's control.

### 2. Threshold

Any planned transfer with a USD value exceeding USD \$8,000 (approx. 68,966 WEX at \$0.116/WEX) requires the scheduled transfer workflow below.

### 3. Scheduled Transfer Workflow

a. Create a Scheduled Transfer entry in the dataroom (folder: Treasury Transfers) at least 24 hours before broadcasting the transaction. The entry must include:

- Amount (USD and **WEX** equivalent using the private sale price of \$0.116/**WEX**)
- Recipient address (on-chain address or vendor bank details or card transaction)
- Purpose (short description)
- Earliest execution timestamp (UTC)

b. Public waiting period: Wait a minimum of 424 hours from the Scheduled Transfer entry timestamp before broadcasting the transaction.

c. Broadcast and evidence: After broadcasting, paste the on-chain tx hash into the same Scheduled Transfer entry and upload any supporting evidence (vendor invoice, delivery photos, receipts).

d. Exceptions and emergency process

- Emergency transfers (e.g., to mitigate an active security incident) may be executed immediately but must be documented in the dataroom within 12 hours and include a full incident rationale and approval log signed by the Founder on duty.
- Any exception must be recorded and justified in the Scheduled Transfer entry.

e. Transparency and recordkeeping

- The Issuer will maintain a ledger in the Treasury Transfers folder with: Date, USD amount, **WEX** amount, recipient, purpose, tx hash, and link to supporting documents.
- All Scheduled Transfer entries and ledger updates must be visible to authorised dataroom viewers within 48 hours of execution.

f. Review and updates

- This policy will be reviewed quarterly and updated as governance and multisig controls are introduced.
