

Executive Summary

Wnode is building a **planetary compute mesh** powered by everyday devices including laptops, desktops, servers, EVs, IoT hardware and unlocking the world's largest untapped resource: **idle compute**.

AI demand is exploding toward **\$1T**, but cloud monopolies cannot scale fast enough.

Meanwhile, over **75% of global hardware sits unused and destined for landfill**.

Wnode connects this idle capacity into a sovereign, decentralised compute network that is cheaper, faster to scale, and owned by the people who power it.

The architecture is built. The governance model is built. The tokenomics are built. The investor assets are built. The MVP is live.

Wnode is now entering its **private sale phase**, raising capital to activate the mesh, scale node operators, and onboard enterprise compute buyers.

With a **fixed supply of 10,000,000 WNODE**, a **fiat-first revenue engine**, and a **human-based governance model**, Wnode is positioned to become the world's first people-owned compute layer and a truly decentralised alternative to cloud monopolies at the exact moment global demand is exploding.

Wnode is not a concept.

It is a near-ready network awaiting ignition.

1. The Problem: Compute Scarcity in a World Full of Hardware

AI workloads are growing exponentially, but compute supply is constrained by:

- Centralised cloud monopolies
- High and unpredictable pricing
- Long provisioning delays
- Vendor lock-in
- Geopolitical chokepoints
- Limited elasticity

At the same time:

- **Most global hardware is idle**
- Billions of devices have unused CPU/GPU cycles

- Enterprises underutilise their fleets
- Households have powerful machines sitting dormant

The world is not short of compute.

It is short of a way to unlock it.

2. The Solution: A Planetary Compute Mesh Powered by People

Wnode transforms everyday devices into a **sovereign, decentralised compute network**.

Core Innovations

- **Zero-trust execution** (RAM-only, sandboxed, cryptographically verified)
- **Autonomous routing engine** (assigns jobs to optimal nodes)
- **Multi-class node architecture** (browser → desktop → enterprise → IoT)
- **Fiat-first economics** (operators earn USD, clients pay USD)
- **Human governance** (1 Soul = 1 Vote, no plutocracy)

This creates a **global compute layer** that is:

- Cheaper than AWS
- More elastic than any cloud
- More decentralised than any blockchain
- More scalable than any single provider

Wnode doesn't compete with the cloud.

It replaces the cloud for the workloads that matter most.

3. The Business Model: Fiat-First, High-Margin, Infinitely Scalable

Wnode's economic engine is simple and powerful.

Revenue Flow (Fiat)

- **70%** → Node Operators
- **10%** → Sales Source
- **10%** → Affiliate Tree (3% L1, 7% L2)
- **7%** → The Steward

- **3%** → Founder Override

Why this model wins

- Operators earn real money, not speculative tokens
- Enterprise clients avoid token volatility
- Wnode captures margin at scale
- Affiliate trees create viral growth loops
- Tokenomics remain clean and finite

Token Utility (WNODE)

- **Fixed supply: 10,000,000 WNODE**
- Zero inflation
- Staking for reliability
- Performance bonuses
- Partner payments
- **No governance rights** (governance is human-based)

This dual-engine model (fiat + token) creates **sustainable, compounding economic gravity**.

4. Traction, Readiness & Roadmap

MVP Complete

- RAM-only execution
- Node onboarding
- Basic compute tasks
- Governance architecture
- Tokenomics
- Constitution
- Full investor asset suite

Next Milestones

Phase 2 — Private Sale (Now)

- Token generation
- Governance bootstrapping

- Initial node incentives

Phase 3 — Mesh Activation

- Autonomous routing engine
- Verification layer
- Dynamic market pricing

Phase 4 — Governance Activation

- Board formation
- Constitution ratification

Phase 5 — Enterprise Scaling

- Corporate hardware fleets
- IoT deployments
- Robotics & EV compute classes

Wnode is not early.

Wnode is right on time.

5. The Ask: Private Sale Round

Wnode is raising a **private round** to fund the transition from MVP to full mesh activation.

Use of Funds

- Routing engine completion
- Enterprise integrations
- Node operator growth
- Security & verification layers
- Infrastructure sovereignty (bare-metal, UPS, solar)
- Commercial scaling

Why invest now

- Compute is the new oil
- Decentralised compute is inevitable
- Wnode unifies:
 - raw compute

- fiat economics
- human governance
- The architecture is built
- The assets are built
- The timing is perfect

Wnode is the world's first people-owned compute layer.

This is the moment to take a position.
