

WNODE — Investor One-Pager

AI-Powered Planetary Compute Mesh

The Problem

AI compute demand is exploding. Centralised cloud providers create:

- High and unpredictable pricing
- Artificial scarcity
- Vendor lock-in
- Single points of failure
- Confusing access for startups and emerging markets

Meanwhile, **up to 75% of global hardware sits idle** — a massive untapped economic resource.

The Wnode Solution

Wnode transforms idle global hardware into a **planetary compute mesh** powered by:

- **AI-driven routing**
- **RAM-only execution** (no storage, no leakage)
- **Deterministic, verifiable compute**
- **USD pay in/outs + token incentives**
- **3-click onboarding (“Granny-Proof”)**

Anyone can contribute compute. Anyone can access compute. The network governs itself.

Why Wnode Wins

- **Sovereign Stack** — own AI model, own hardware, own tech
- **Eco-Aligned** — no data centres, no cooling, no waste
- **Ultra-Low Cost** — no infrastructure overhead
- **Global Reach** — every laptop, desktop, and server becomes a node

- **Regulator-Safe** — FIAT first, utility token second
- **Capture-Resistant Governance** — 1 soul = 1 vote

How It Works

For Node Operators (Nodlrs)

- Install the app
- Contribute compute
- Get paid in **USD** (tokens optional)

For Customers

- Submit tasks
- Pay in **USD** (tokens optional)
- Receive fast, confidential, verifiable compute

For the Network

- AI routes tasks to the best node
- Execution happens in RAM only
- Results are cryptographically verified
- Governance ensures fairness and transparency

Governance

Wnode uses a **soul-based governance model**:

- Governance Board (oversight)
- Stewards (operations)
- Infrastructure Manager (technical integrity)
- Community (1 soul = 1 vote)

No whales. No privileged nodes. No centralised control.

Token Utility (WNODE)

WNODE is a **utility token**, used for:

- Node rewards
- Partner payments
- Staking
- Incentives
- Future compute payments

FIAT comes first for both customers and node operators — ensuring regulatory clarity and real-world adoption.

Market Opportunity

AI compute is projected to exceed **\$1 trillion** in demand this decade. Decentralised compute is the fastest-growing segment of Web3. Wnode sits at the intersection of:

- AI
- DePIN
- Distributed compute
- Tokenised incentives
- Sovereign AI infrastructure

This is a once-per-generation convergence.

Roadmap

Phase 1 — MVP Node onboarding, RAM-only compute

Phase 2 — Private Sale Token generation, governance bootstrapping

Phase 3 — Mesh Activation Routing engine, verification layer

Phase 4 — Governance Activation Board formation, constitution ratification

Phase 5 — Scaling Enterprise integrations, global expansion
