

WEX (Wenode)Tokenomics: The Economic Engine of AI Powered Planetary Compute Mesh

1. Executive Summary

Wenode is a Decentralized Physical Infrastructure Network (DePIN) designed to provide scalable, green, and cost-effective AI compute. By repurposing existing global hardware, Wenode eliminates the massive CAPEX associated with traditional data centers. Our "Fiat-First hybrid" architecture allows enterprises to access decentralized power with zero crypto complexity, while the WEX token serves as a high-scarcity utility layer to incentivize network participants and accelerate growth.

2. Token Utility & Core Mechanics

The **WEX** token is a fixed-supply utility asset with a hard cap of 10,000,000 tokens. No further minting is possible, ensuring that as the network’s compute volume increases, the scarcity of the token scales proportionally.

Compute Payments: Users can utilize **WEX** tokens to access premium AI features and clustering services at a discount compared to fiat rates. (Roll out Q3 2026)

Node Reward Boosts: Operators can stake **WEX** to increase their yield multipliers for compute tasks. (Roll out Q3 2026)

Governance: While financial in nature, the token is decoupled from governance to prevent whale dominance, ensuring the network remains in the hands of human operators.

3. Final Allocation Breakdown (100% Total)

Total Supply: 10,000,000 **WEX**

Allocation	%	Amount	Purpose & Strategy
Node Rewards	20%	2,500,000	Long-term incentives for verified compute providers.

Allocation	%	Amount	Purpose & Strategy
Investment Rounds	20%	1,500,000	Combined Private Seed and Public Presale capital.
Liquidity Pool	15%	1,500,000	Locked DEX liquidity to ensure market stability and depth.
Founder Council	10%	1,000,000	10 Prestige advisory slots for OEMs and industry visionaries.
Operations	10%	1,000,000	Core dev, security audits, and daily network management.
DAO Treasury	10%	1,000,000	Ecosystem sustainability, R&D, and future-proofing.
Founder (Stephen Soos)	5%	500,000	Dedicated lead founder allocation to ensure long-term alignment.
Growth & Infra	5%	500,000	Marketing, user acquisition, and direct mesh scaling.
Partner Allocations	5%	500,000	Strategic hardware and OEM integration incentives.
Total	100%	10,000,000	Fixed Total Supply

4. Financial Architecture: The "Fiat-First" Advantage

To achieve mass adoption, **WEX** abstracts the blockchain layer for the end-user.

Stripe Integration: All customer payments and node operator rewards are processed via Stripe Connect. Stripe takes care of AML and KYC as part of onboarding.

Fiat Payouts: Node operators earn stable income in fiat, providing professional predictability and fraud protection.

Optional Accelerator: The WEX token remains an optional but powerful secondary layer for users who want to maximize ROI or access advanced AI clusters.

5. Radical Governance: One Soul, One Vote

Wenode implements a true "Human-Centric" governance model.

NODLR Sovereignty: Voting power is restricted to verified human node operators.

Anti-Plutocracy: 1 Verified Human = 1 Vote. Governance is not token-weighted; holding more tokens does not grant more influence.

The Board: The Founder Council (including Stephen Soos and OEM partners) serves in an advisory capacity, providing strategic guidance without overriding the community.

6. Investment Opportunity: Private Seed Round

Wenode is currently conducting a Private Seed Sale as part of the 15% Investment Allocation.

Raise Target: \$80,000 (Specifically for hardware procurement and tech acceleration).

Private Price: \$0.116 per WEX (Offered at a 30% strategic discount compared to the \$0.166 public launch price).

Allotment: Approximately 689,655 WEX (6.9% of total supply).

7. Vesting & Security

To protect investors and the community, all core team and advisory allocations are subject to strict lockups:

Founder & Council: 6-month cliff followed by 18-month linear vesting.

Strategic Partners: 12-month linear vesting.

Liquidity: Minimum 12-month lock on DEX liquidity.

Footnote: Official Token Address & Early Test Deployments

During the early technical preparation phase for the Wnode private sale, two preliminary WNODE tokens were minted to validate deployment parameters. These were internal test deployments created *before* the final WEX tokenomics were completed. They were never used, never distributed, and contain no supply or functionality.

8. Test Deployments

The **only official token** recognized by the Wnode ecosystem is:

WEX (Wenode Utility Token) Polygon Mainnet:

0xa382506695f825fe807C3f4D47aEB986046bdc57

The following two early WNODE deployments are formally **deprecated** and not part of the Wnode economic model:

- 0xF7bB2ea845b9e56aEf9E364d6Ae05Ea88236ca40
- 0x62eFDE5D3C2318E01237eFBb7Eac35BdC7a14D53

Wnode maintains a **single canonical token** with a fixed supply of 10,000,000 WEX. No additional tokens will be created.
